

Water Test Results

Contaminant	Date	Results	MCL	MCLG	Possible Sources of Contamination
-------------	------	---------	-----	------	-----------------------------------

Microbiological

COLIFORM (TCR) (9)	Aug 2024	1 pos	1 pos/mo or 5%	0 pos	Naturally present in the environment.
--------------------	----------	-------	----------------	-------	---------------------------------------

Inorganics

BARIUM	5/15/2024	0.0057 ppm	2 ppm	2 ppm	Discharge of drilling wastes. Discharge from metal refineries. Erosion of natural deposits.
FLUORIDE (3)	7/11/2024	1.18 ppm	4 ppm	4 ppm	Erosion of natural deposits. Water additive which promotes strong teeth. Discharge from fertilizer and aluminum factories.

Synthetics

TOTAL PFAS (6 regulated) (7)	11/13/2024	8.74 ppt	20 ppt	0 ppt	Man-made chemicals in a wide variety of consumer products and industrial applications. Stain- and water-resistant fabrics, carpeting, non-stick cookware, cleaning products and paints, Class B Firefighting foam (AFFF) foam and industrial processes.
------------------------------	------------	----------	--------	-------	---

Lead/Copper

COPPER 90TH% VALUE (5)	1/1/2021 - 12/31/2023	0.011 ppm Range (0.0035-0.0137 ppm)	AL = 1.3 ppm	1.3 ppm	Corrosion of household plumbing systems.
------------------------	-----------------------	--	--------------	---------	--

Number of sampling sites exceeding the action level: 0

LEAD 90TH% VALUE (5)	1/1/2021 - 12/31/2023	0 ppb Range (0 ppb)	AL = 15 ppb	0 ppb	Corrosion of household plumbing systems.
----------------------	-----------------------	------------------------	-------------	-------	--

Number of sampling sites exceeding the action level: 0 Complete lead tap sampling data are available upon request

Disinfectants and Disinfection Byproducts

LOBSTER COVE RD

TOTAL HALOACETIC ACIDS (HAA5) (10)	LRAA(2024)	26 ppb Range (14-32 ppb)	60 ppb	0 ppb	By-product of drinking water chlorination.
TOTAL TRIHALOMETHANE (TTHM) (10)	LRAA(2024)	41 ppb Range (31-49 ppb)	80 ppb	0 ppb	By-product of drinking water chlorination.

TOWNSEND AVENUE

TOTAL HALOACETIC ACIDS (HAA5) (10)	LRAA(2024)	25 ppb Range (18-28 ppb)	60 ppb	0 ppb	By-product of drinking water chlorination.
TOTAL TRIHALOMETHANE (TTHM) (10)	LRAA(2024)	39 ppb Range (29-45 ppb)	80 ppb	0 ppb	By-product of drinking water chlorination.

Chlorine Residual (Add chlorine residual information)

CHLORINE RESIDUAL	Range (-.52 -2.19 ppm)	MRDL=4 ppm	MRDLG= 4 ppm	By-product of drinking water chlorination.
-------------------	------------------------	------------	--------------	--

Turbidity (Add turbidity information, highest monthly reading in 2024)

TURBIDITY	09/24/24	0.16 NTU	5 ntu	N/A	Soil runoff.
-----------	----------	----------	-------	-----	--------------

Notes:

- 1) Arsenic: While your drinking water may meet EPA's standard for Arsenic, if it contains between 5 to 10 ppb you should know that the standard balances the current understanding of arsenic's possible health effects against the costs of removing it from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems. Quarterly compliance is based on running annual average.
- 2) E. coli: E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely-compromised immune systems.
- 3) Fluoride: For those systems that fluoridate, fluoride levels must be maintained between 0.5 to 1.2 ppm. The optimum level is 0.7 ppm.
- 4) Gross Alpha: Action level over 5 pCi/L requires testing for Radium 226 and 228. Action level over 15 pCi/L requires testing for Uranium. Compliance is based on Gross Alpha results minus Uranium results = Net Gross Alpha.
- 5) Lead/Copper: Action levels (AL) are measured at consumer's tap. 90% of the tests must be equal to or below the action level.
- 6) Nitrate: Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant you should ask advice from your health provider.
- 7) PFAS: The degree of risk depends on the level of chemicals and duration of exposure. Laboratory studies of animals exposed to high doses of PFAS have shown numerous negative effects such as issues with reproduction, growth and development, thyroid function, immune system, neurology, as well as injury to the liver. Research is still relatively new, and more needs to be done to fully assess exposure effects on the human body.
- 8) Radon: The State of Maine adopted a Maximum Exposure Guideline (MEG) for Radon in drinking water at 4000 pCi/L, effective 1/1/07. If Radon exceeds the MEG in water, treatment is recommended. It is also advisable to test indoor air for Radon.
- 9) Total Coliform Bacteria: Reported as the highest monthly number of positive samples, for water systems that take less than 40 samples per month.
- 10) TTHM/HAA5: Total Trihalomethanes and Haloacetic Acids (TTHM and HAA5) are formed as a by-product of drinking water chlorination. This chemical reaction occurs when chlorine combines with naturally occurring organic matter in water. Compliance is based on LRAA.
- 11) Turbidity: Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea and associated headaches.

All other regulated drinking water contaminants were below detection levels.

Secondary Contaminants (You are not required to list detects for secondary contaminants, but this information, particularly sodium levels, might be useful to your customers. The decision to supply this information in your CCR is up to you.)

MAGNESIUM	1 ppm	5/15/2024
MANGANESE	0.0027 ppm	5/15/2024
SODIUM	21 ppm	5/15/2024
SULFATE	11 ppm	5/15/2024
ZINC	0.0017 ppm	5/15/2024
CHLORIDE	22 ppm	5/15/2024

Health Information

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production and can also come from gas stations, urban runoff, and septic systems.

Radioactive Contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791) or at the following link:

<https://www.epa.gov/ccr/forms/contact-us-about-consumer-confidence-reports>

Lead and Copper

Lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your public water system is responsible for providing high quality drinking water and removing lead pipes, but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, contact your public water system. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at: <http://www.epa.gov/safewater/lead>

Our system completed a Lead Service Line Inventory as required by the Revised Lead and Copper Rule. It is publicly accessible at this location: 184 Adams Pond Rd. Boothbay, ME 04537

Location/URL (must be direct)

Violations

No Violations in 2024

Waiver Information (to be included in the CCR for systems that were granted a waiver)

No Water Testing Waivers in 2024

Please share this information with anyone who drinks this water (or their guardians), especially those who may not have received this report directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this report in a public place or distributing copies by hand, mail, email, or another method.
